## GATE 21 EE 31:

The causal signal with z-transform  $\frac{z^2}{(z-a)^2}$  is

### Solution:

Given z transform of the signal is  $\frac{z^2}{(z-a)^2}$

Let the signal be  $x(n)$

$$x(n) = \mathcal{Z}^{-1} \left( \frac{z^2}{(z-a)^2} \right) \quad (1)$$

$$\frac{z^2}{(z-a)^2} \xleftrightarrow{Z} (n+1)a^n u(n) \quad |z| > |a| \quad (2)$$

$$x(n) = (n+1)a^n u(n) \quad (3)$$
